

This assignment is all about understanding the **Context-Task-Constraint** framework. A weak prompt is usually vague and underspecified, forcing the AI to guess. A strong prompt provides a persona, specific details, and clear formatting rules.

Here are the four categories with comparisons and the underlying logic of why the strong versions work better.

1. Resume Optimization

The Goal: Tailor a generic resume to a specific job description.

- **Weak Prompt:** "Rewrite my resume for a marketing job."
 - **Strong Prompt:** "Act as an expert Career Coach. I am applying for a Senior SEO Specialist role at a tech startup. Rewrite my current experience section to highlight 'organic growth' and 'data analytics.' Use a professional tone, include 3 bullet points per role, and ensure each starts with an active verb like 'spearheaded' or 'orchestrated'."
-

2. Business Idea Generation

The Goal: Brainstorm a viable, niche-specific product or service.

- **Weak Prompt:** "Give me a good business idea for 2026."
 - **Strong Prompt:** "Act as a Startup Consultant. Generate 5 business ideas involving AI-driven personal sustainability (reducing carbon footprints at home). The ideas must be low-capital to start, target Gen Z consumers, and include a possible monetization strategy for each (e.g., subscription or one-time fee)."
-

3. Study Plan

The Goal: Create a structured learning path for a complex topic.

- **Weak Prompt:** "Make a study plan for me to learn Python."
 - **Strong Prompt:** "I am a complete beginner with 5 hours available per week. Create a 4-week structured study plan to learn Python for Data Analysis. Break it down by week, list 3 free resources (like YouTube or documentation), and include a small 'mini-project' at the end of each week to test my knowledge."
-

4. Comparison Table: Why "Strong" Wins

To document your results for the assignment, you can use this table to explain the mechanics

of prompt engineering.

Feature	Weak Prompt	Strong Prompt	Logic / Result
Persona	None	"Career Coach", "Consultant"	Sets the tone and depth of expertise.
Context	Vague	Specific role/audience/hours	Reduces "hallucinations" and irrelevant info.
Constraints	None	"No more than 50 words", "3 bullet points"	Controls the output length and structure.
Goal	General	Outcome-oriented (e.g., "monetization")	Ensures the AI provides actionable value.

The "Prompt Engineering" Formula

If you need to explain the theory in your assignment, you can summarize it with this simple acronym: **C.R.E.A.T.E.**

1. **Character:** Who should the AI be?
2. **Request:** What is the specific task?
3. **Examples:** (Optional) Provide a sample of what you want.
4. **Adjustments:** Specific constraints (word count, tone).
5. **Type of Output:** Table, list, code, or essay?
6. **Extras:** Any other details to narrow the focus.

Would you like me to generate a "Prompt Template" that you can use as a tool for any future assignment?
